

## INTRODUCTION

Fred Holley | Circuit Rider III

---

**M**y name is Frederick Holley. I was born and raised in the small Town of Pulteney, NY, on the shores of Keuka Lake, and graduated from Hammondsport Central School, Class of 1972. I grew up on hard sulphur water and knew at an early age that water was where I wanted to be.

I am a Retired NYS certified grade 1B and D water plant Operation Specialist, ORC from the Village of Webster. I was employed by the Village of Webster for 26 years as a water plant, distribution system Operation Specialist. My last 6 years at the grade 1B level with the final 3 years as ORC until the plant closed and the total system was turned over to the MCWA in December of 2013, thus eliminating my job. We were a small ground water plant serving a population of 7500. My duties included overseeing day to day operations, including working my own scheduled shift as an Operation Specialist. I operated

and maintained deep well vertical turbine water pumps and high lift booster pumps.

I believe with my years of experience working within the water field, I can use my passion for safe drinking water to help those in need. I look forward to meeting and working with Operation Specialists in my area of Western NY and all of New York State. 💧💧
